

5kW solar power generation in Moldova

Overview

What percentage of Moldova's electricity is renewable?

In 2020, renewable electricity accounted for just over 13% of domestic generation in Moldova. Moldova's deployment of wind and solar power has been modest, though, and there remains over 27 GW of potential renewable generation capacity via wind, solar, biomass and hydro. Share of Generation Sources for Electricity Supply, 2019.

How many MW of wind and solar energy is installed in Moldova?

, deployment of wind and solar energy in Moldova has been very slow. As of 2022, only 97.9 MW of renewable capacity for electricity generation was installed. Figure 1. Installed electricity generation capacity by type. 4.4 MW / 13% Non-renewable: 441.4 MW / 79% Renewable Energy Potential The Republic of Moldova features great potential.

What is Moldova's national energy strategy?

To increase the level of clean and domestically-derived energy, Moldova established its National Energy Strategy (NES) for 2030, with three key objectives: Ensuring the security of supply of energy; Developing competitive markets and their regional and European integration; and Ensuring sustainability of the energy sector and climate change mitigation.

What is the electricity system like in Moldova?

The electricity system in Moldova is characterised by its reliance on imports. In 2020, of its 4.4 TWh of electricity demand, 81% was supplied by imports, either from Ukraine (4%) or from the Cuciurgani-Moldavskaya GRES (MGRES) gas-fired power plant (77%) located in the breakaway region of Transnistria.

Does Moldova have a power grid?

Moldova's electricity grid was predominantly built in the time of the Soviet Union, making it relatively old and inefficient. It is synchronously

interconnected with Ukraine's Integrated Power System (IPS) and, in turn, Russia's Unified Power System (UPS) in the northern and south-eastern parts of the grid.

What is electricity demand in Moldova?

Electricity demand in Moldova is characterised by a winter peak demand. The typical load variation in the winter season, based on 2019 operational data is between a minimum base load of 540 MW and a maximum peak load of 950 MW, while in the summer, it varies from a minimum of 480 MW and a peak load of 800 MW.
