

# Bangladesh household yard solar integrated machine

### **Overview**

Are solar home systems generating more electricity in Bangladesh?

In Bangladesh, many of the Solar Home Systems (SHS) previously installed are generating more electricity than the households consume or can store because of modification of the system design and introduction of more energy efficient light and appliances.

How many solar home systems are installed in Bangladesh?

As of May 2017, over 4 million solar home systems had been installed, impacting more than 12 percent of the entire Bangladeshi population. The Solar Home Systems (SHS) initiative began in January 2003 and was facilitated by the government-owned Infrastructure Development Company Limited (IDCOL).

Why did Bangladesh start a solar home system?

Rather than waiting for communities to connect to the national grid, the Bangladesh government began the Solar Home System (SHS) program, under the leadership of Infrastructure Development Company Ltd. (IDCOL), to mobilize the private and non-governmental sectors to find ways to rapidly bring clean electricity services to the people.

Are Solar Homes a viable option for off-grid households in Bangladesh?

Of the off-grid population, the vast majority is concentrated in rural Bangladesh where the electrification rate dips to 28%. Individual solar home systems are limited by their initial capacity and cannot serve more or any larger electricity consuming devices.

Why are solar home systems so expensive in Bangladesh?

Current solar home systems are limited in capacity and continue to remain prohibitively expensive for a large portion of the 65 million people who do not have access to the grid in Bangladesh. As a result, they rely on costly and

unhealthy alternatives like diesel generators and kerosene lamps.

Why is solar power important in Bangladesh?

The focus was on providing basic electricity coverage to improve the life of rural regions and low-income households in Bangladesh. As of May 2017, over 4 million solar home systems had been installed, impacting more than 12 percent of the entire Bangladeshi population.
