

# **Base station outdoor cabinet installation**

## Overview

---

How should a base station antenna be installed?

The hardware installation guidelines are limited but important for reliable base station performance. The base station antenna should be installed in open sky conditions, away from external influences that hinder the direct line of sight between the antenna and the GNSS satellites.

How much does a base station CB cost?

HOA and Zoning: Check local regulations and homeowner association rules before installing visible antennas. How much does a complete base station CB setup cost?

Basic setups start around \$300-500, including radio, antenna, coax, and power supply. Mid-range systems run \$500-1000, while premium installations can exceed \$2000.

Where should an antenna be installed?

In general, this means that the ideal antenna installation is near the centre of the work area. For larger work areas (several 10's of km's), it is advised to place several base stations for optimal performance and easy selection of the nearest base station.

Do base stations need a power supply?

Power Requirements: Base stations operate on 120V AC power rather than 12V DC, requiring either built-in power supplies or separate AC-to-DC converters. Size and Ergonomics: Designed for desktop use, these radios feature full-size controls, making operation more comfortable during extended sessions.

Can a SSB antenna be used as a base station?

Yes, with a proper 12V DC power supply (3-5 amps minimum) and base

antenna system. However, dedicated base stations typically offer better features, ergonomics, and performance for home use. Typical range is 15-25 miles for local communications. With SSB and optimal conditions, 50+ mile contacts are possible.

What is the range of a solar base station?

However, dedicated base stations typically offer better features, ergonomics, and performance for home use. Typical range is 15-25 miles for local communications. With SSB and optimal conditions, 50+ mile contacts are possible. Skip propagation can enable worldwide communication during peak solar activity.
