

# Central Asia Energy Storage Power Supply Quote

#### **Overview**

Central Asia has faced major energy and water security challenges. Technically, water from the Pamir and Tian Shan Mountain ranges could be sufficient to meet the needs of the countries in the region, if there.

Can energy storage solve transboundary water and energy conflict in Central Asia?

A solution for transboundary water and energy conflict in Central Asia is proposed. Benefits of energy storage beyond the energy sector are shown. Long duration energy storage is key for high shares of solar PV and wind energy in the region. An open-access, integrated water and energy system model of Central Asia is developed.

Does Central Asia have an integrated water and energy system?

An open-access, integrated water and energy system model of Central Asia is developed. Central Asia's energy transition to a high share of renewable energy by 2050 is analyzed. Model for Energy Supply Systems Alternatives and their General Environmental Impact 1. Introduction.

What is Central Asia's electricity generation mix from 2020 to 2050?

Central Asia's electricity generation mix from 2020 to 2050. Assuming a high-renewable energy scenario with 66% of renewable electricity by 2050. The share of solar PV increases from 2% in 2020 to 34% of total electricity generation by 2050, and natural gas and coal generated electricity combined reduces from 73% in 2020 to 34% in 2050. Fig. 7.

Is water use a problem in Central Asia?

Introduction Water use for irrigation and electricity generation has long been subject to dispute between downstream and upstream countries in Central Asia .

What is a water management challenge in Central Asia?

A water management challenge in Central Asia is a conflict of interests

between upstream and downstream countries. Upstream Kyrgyzstan and Tajikistan have abundant water resources that they want to release during winter to fulfil their energy needs through hydropower generation (Fig. 1 (a)).

How do we model long-term energy storage needs?

We model long-term energy storage needs in a monthly resolution to capture seasonal variations of renewable electricity generation sources, mainly hydropower, solar and wind generation, as well as electricity demand.
