

Construction of 5G flywheel energy storage project in the Netherlands

Overview

How much does a hybrid battery-flywheel storage facility cost?

S4 Energy and ABB recently installed a hybrid battery-flywheel storage facility in the Netherlands. The project features a 10 MW battery system and a 3 MW flywheel system and can reportedly offer a levelized cost of storage ranging between €0.020 (\$0.020)/kWh and €0.12/kWh. ABB regenerative drives power S4 Energy Kinext's energy-storage flywheels.

Can flywheels be used for energy storage?

While a few flywheels for energy storage have been deployed around the world in the past few years, including one of the US' earliest advanced non-pumped hydro storage systems in a pilot by the government Department of Energy, their widespread use has not taken off to date.

Does S4 Energy use a kinext flywheel?

S4 Energy launched into the frequency containment reserve market using a combination of its KINEXT flywheels and batteries in 2017. According to the company's project director Dominique Becker Hoff, the flywheel supplies instantaneous power for very short periods of time without losing capacity.

What are the benefits of flywheel storage?

ABB says that flywheel storage enables fast charging and discharging. Flywheels also have a long cycle lifetime, as they do not degrade and do not require high maintenance costs. In addition, they typically have a low environmental impact.
