

Cost of all-black components

Overview

What is the difference between traditional and all-black solar panels?

There aren't many differences between "traditional" solar panels and their all-black counterparts. Traditional panels use white backsheets and silver frames, while all-black modules use — you guessed it — black backsheets and black frames.

Do all-black modules lose efficiency?

But a 0.5% efficiency loss isn't especially noticeable to the average residential customer, so often these extensive production efforts aren't made on all-black modules.

Are all-black modules better than white-backsheet modules?

"All-black modules have a more aesthetically pleasing look but lose the benefit of reflection and light trapping, resulting in a lower photocurrent — up to 3% less than a white-backsheet module. Three percent less current means about 0.5% lower absolute efficiency."

Are all-black solar panels a trend?

Customer demand reinforces the all-black trend. Many residential solar installation companies across the country now offer all-black modules as standard. Washington-based Northwest Electric and Solar works on both residential and commercial projects but keeps things simple for homeowners.
