

# Energy Storage Battery Project Cooperation

## Overview

---

Can battery storage reduce energy costs?

Battery storage can help reduce energy costs, enhance the use of renewable energy sources and reduce reliance on fossil fuels. BYD Energy Storage and Saudi Electricity Company (SEC) have signed a contract to deliver the world's largest grid-scale energy storage project totalling 12.5GWh.

Why is battery storage important?

Battery storage projects play a vital role in enhancing grid stability and efficiency, making them essential for modern energy systems. Battery storage can help reduce energy costs, enhance the use of renewable energy sources and reduce reliance on fossil fuels.

Is battery storage a viable solution to increase system flexibility?

Among the energy storage options available, battery storage is becoming a feasible solution to increase system flexibility, due to its fast response, easy deployment and cost reduction trends, helping to integrate higher shares of variable renewable energy in a reliable manner.

How big is BYD energy storage & Saudi Electricity Company?

Recently, BYD Energy Storage and Saudi Electricity Company successfully signed the world's largest grid-scale energy storage projects contracts with a capacity of 12.5GWh at the time. Combined with the previously delivered 2.6GWh project, the total cooperation now has amounted to a massive 15.1GWh of projects.

How will BYD's new energy storage systems work?

The new energy storage systems will be installed across five locations in the Kingdom and fully integrated into the national power transmission network. The battery energy storage systems (BESS) provided by BYD will use its new-generation MC Cube-T ESS and its pioneering Cell-to-System (CTS) integration

technology.

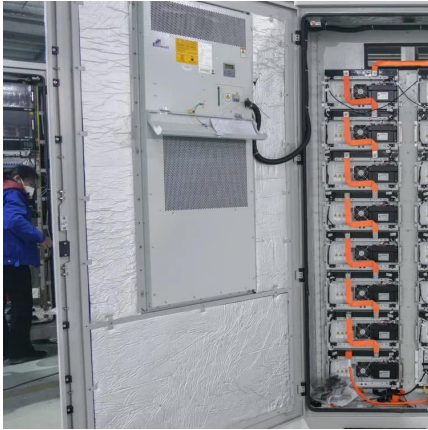

What is BYD battery energy storage system (BESS)?

The battery energy storage systems (BESS) provided by BYD will use its new-generation MC Cube-T ESS and its pioneering Cell-to-System (CTS) integration technology. The advanced tech will deliver a Vcfs index of more than 33% – a measure of how efficiently cell volume is utilised within the system.
