

French lithium energy storage power supply sales

Overview

Why is France upping lithium production?

After years of deindustrialisation, France is upping lithium production to support battery manufacturing and the green transition. Why are the EU and France lurching towards lithium?

The EU's and France's lurch towards lithium is, of course, not just intended to support, and profit, from the energy transition but to buffer an overreliance – and a dominance of future industry – by China, which the US recently accused of “flooding” the market to drive out rivals.

What is France's largest lithium project?

One of the country's largest lithium projects, EMILI, is being developed by French multinational Imerys. The project in Beauvoir, central France, where lithium was first detected in the 1960s, hopes to produce enough lithium per year, over 25 years, to power 700,000 EVs.

Is lithium de France developing a geothermal project in Alsace?

Lithium de France, a subsidiary of French Arverne group, is also developing a lithium brine geothermal project in Alsace. The company has just concluded a prefeasibility study on surface elements of the project and is currently awaiting its first drilling permit to confirm the resource.

Who is the best battery energy storage supplier?

When it comes to energy storage suppliers, Huntkey is your best choice as a battery energy storage systems company with products, solutions and services covering the entire energy value chain. If you want more information, please visit the official website.

How many EVs can a lithium project power?

The project in Beauvoir, central France, where lithium was first detected in the 1960s, hopes to produce enough lithium per year, over 25 years, to power 700,000 EVs. Production is due to start in 2028, with the project currently undergoing a public consultation. Other miners are focused on extracting lithium from underground geothermal brines.
