

Heishan Base Station Energy Storage Project

Overview

Can a bi-level optimization model maximize the benefits of base station energy storage?

To maximize overall benefits for the investors and operators of base station energy storage, we proposed a bi-level optimization model for the operation of the energy storage, and the planning of 5G base stations considering the sleep mechanism.

Will 5G base station energy storage contribute to demand response?

Reference revealed that the 5G base station energy storage could participate in demand response, and obtain certain benefits when it meets the basic power backup requirements.

What is CHN energy's new photovoltaic base project?

It was constructed in conjunction with the CHN Energy's East Ningxia 1.5 GW Composite Photovoltaic Base Project, with a planned total capacity of 200 MW/400 MWh.

What are the constraint conditions of the energy storage configuration?

The constraint conditions of the energy storage configuration in the multi-base station cooperative system included energy storage investment cost constraints, and energy storage battery multiplier constraints; the time scale was in years.

Why does a base station have a low power load?

Therefore, when the electricity price was at its peak, the base station system had a low power load and would discharge to the grid in part of the time. Conversely, when the electricity price was at its low, the base station system had a high power load.

What is the traditional configuration method of a base station battery?

The traditional configuration method of a base station battery comprehensively considers the importance of the 5G base station, reliability of mains, geographical location, long-term development, battery life, and other factors .

Heishan Base Station Energy Storage Project

Dr. WANG Guangqian: Promoting Synergistic "Water-Soil-Light

Dr. WANG Guangqian pointed out that based on the Heishan Gorge Hydraulic Project, a clean energy base integrating wind, light, water, and storage will be built.
