

# **How many energy storage photovoltaic power stations are there in North Macedonia**

## Overview

---

How much solar power does Macedonia have in 2022?

By the end of 2022, the country had reached a photovoltaic capacity of approximately 144 MW, with projections indicating rapid growth in the coming years. In 2023 alone, North Macedonia saw an impressive increase in solar capacity, with new installations contributing to a total increase of 251% compared to the previous year.

How many MW of photovoltaic power will come online in 2 years?

Kovačevski said he expects the remaining 130 MW on state-owned and private land, awarded through public calls, to come online within two years. Minister of Economy Kreshnik Bekteshi revealed there are photovoltaic facilities with a combined 65.7 MW in capacity currently connected to the grid.

Where is Skopje's new photovoltaic system located?

The new photovoltaic system, the largest in the country, is located southeast of the capital Skopje. GEN-I Skopje, a subsidiary of Slovenia-based GEN-I, won the right to build it in 2019, at a tender for a 50-year lease of state-owned land. Construction started early last year.

What is the combined capacity of WPD & Akuo Energy?

The combined capacity is 200 MW to 300 MW, the prime minister underscored. He said that within 40 days several laws on strategic investments, including for projects being prepared by wpd and Akuo Energy, would be submitted to parliament. Kovačevski pointed out that Mytilineos from Greece intends to build a gas-fired cogeneration plant in Skopje.
