

# How to choose a solar cell system

## Overview

---

How do I choose a solar panel system for my home?

To select a solar panel system for your home, first measure the available space for mounting the panels. Then, set a budget for your system. Finally, choose a system that meets your power requirements while fitting within your space restrictions.

How to choose a solar power system?

Shading: there should be none or minimal shading, for example if your house is surrounded by tall trees it is most likely not suitable for solar power system. Roof type: a flat roof is quite suitable for a solar installation and a pitched roof facing South also works. An East or West orientation is also feasible with a properly sized system.

How do I choose a solar panel company?

Choose solar panel companies that have a history of successful installations and satisfied customers. For example, Sunrun has installed over 900,000 residential solar systems and counting; no provider has more experience installing and maintaining U.S. residential solar panels.

What type of solar cells should I buy?

Purchase the cells. There are a few different types of solar cells to buy, and most good options are either made in the United States, China, or Japan. However, the best cost-to-efficiency option is most likely polycrystalline cells. The number of cells you should buy depends on the amount of energy you're looking to produce.

What do the best solar panels look like?

If you're a homeowner looking for what the best solar panels might look like, it would be monocrystalline. They are more subtle on your roof and won't stand out as much. The final type of panel is thin film solar. There are multiple types

of thin-film technology.

What are the different types of solar panels?

The three main solar panels are as follows: All residential solar panels today are monocrystalline. The word monocrystalline has “mono” as its prefix. These consist of one silicon crystal. These are the most common types of solar panels for residential systems because they’re more efficient and better suited for roofs with limited space.
