

# Iceland 250MW 750MWh gridconnected independent energy storage project

### **Overview**

allows it to produce renewable energy relatively cheaply, from a variety of sources. Iceland is located on the , which makes it one of the most active places in the world. There are over located in Iceland and over 600 . There are over 20 high-temperature steam fields that are at least 150 °C; many of them reac.

There are plans to connect the Icelandic grid with the using a subsea (HVDC) , with a potential capacity of up to 1.2GW, called . It would be the world's longest submarine HVDC cable, if built. This would allow Iceland to export excess energy to UK and in turn linking it to a wider . The project is in planning stages and is controversi.

Iceland's unique geology allows it to produce renewable energy relatively cheaply, from a variety of sources. Iceland is located on the Mid-Atlantic Ridge, which makes it one of the most tectonically active places in the world. There are over 200 volcanoes located in Iceland and over 600 hot springs. There are over 20 high-temperature steam fields that are at least 150 °C; many of them reac...
