

Iraq Power Generation Energy Storage and Frequency Regulation

Overview

The IMF estimate that in 2020 less than half of supplied electricity was billed and less than a quarter paid for. The economics of Iraq's electricity sector is characterized by significant challenges related to supply, demand, infrastructure, and financial sustainability. These issues are compounded by the country's historical context of conflict, sanctions, and ongoing instability.

How does Iraq's power sector perform?

Despite its vast energy resources, the performance of the country's power sector is sub-optimal. Iraq's power sector suffers from a double whammy: unsustainable growth in power demand, coupled with under-investment and a lack of reforms in generation, transmission, and distribution. The result is a growing mismatch between power supply and demand.

When did Iraq reorganize its electricity sector?

While some of the damage of the 1991 war was repaired and about 4,500 MW of generating capacity was available in 1999 when Iraq reorganized its electricity sector. The sector was separated from the Ministry of Industry, and the Commission of Electricity (CoE) was established on June 21, 1999.

Does Iraq have a good power sector?

As a major producer, Iraq's electricity sector is almost entirely dependent on fossil fuels, which account for more than 80% of power generation. Despite its vast energy resources, the performance of the country's power sector is suboptimal.

What are the economic challenges facing Irag's Electricity sector?

The economics of Iraq's electricity sector is characterized by significant challenges related to supply, demand, infrastructure, and financial sustainability. These issues are compounded by the country's historical context of conflict, sanctions, and ongoing instability.

How does Iraq generate electricity?

Iraq's electricity generation primarily depends on fossil fuels. In 202, natural gas was the largest source at 50.4% of the total, followed by oil at 47.6%. Renewable energy, mainly from hydroelectric power, contributed 2%. As of 2023, the 30 gigawatts (GW) of installed capacity cannot meet summer peak demand.

How much of Iraq's Electricity is billed in 2020?

The IMF estimate that in 2020 less than half of supplied electricity was billed and less than a quarter paid for. The economics of Iraq's electricity sector is characterized by significant challenges related to supply, demand, infrastructure, and financial sustainability.
