

Ireland vanadium battery energy storage grid connection

Overview

Where is Ireland's first grid-scale battery energy storage system based?

Statkraft has announced that it is to build Ireland's first four-hour grid-scale battery energy storage system (BESS) in Co. Offaly. The 20MW BESS, supplied by global market leader in utility-scale energy storage solutions and services, Fluence, will be co-located with Statkraft's 55.8MW Cushaling Wind Farm.

How much battery storage do we need in Ireland & Northern Ireland?

In 2021 energy experts Baringa estimated that to hit the 80 per cent renewable electricity targets in Ireland and Northern Ireland by 2030 we would need at least 1,700 MW of battery storage on the island of Ireland. Every battery storage project connected makes our electricity grid more secure and helps to integrate wind and solar power.

What types of batteries can be stored in Ireland?

These include lithium-ion batteries, hydrogen storage, thermal storage, flow batteries and pumped hydro storage. However, thermal storage fell outside of the focus on electricity storage and the potential for additional pumped hydro storage in Ireland is considered to be fairly limited and so neither were modelled in detail.

How long can a battery storage system last in Ireland?

This battery-based energy storage system is designed to provide 20MW for up to four hours. Most grid-scale batteries currently deployed in Ireland range from 30 minutes to two hours of energy storage capacity. The longer the duration of battery energy storage capacity, the more benefits it can offer.

How will a battery-based energy storage system affect energy security in Ireland?

In addition, by participating in the capacity market, the project will have a positive impact on energy security in Ireland. This battery-based energy

storage system is designed to provide 20MW for up to four hours. Most gridscale batteries currently deployed in Ireland range from 30 minutes to two hours of energy storage capacity.

How many grid-scale battery projects are there in Ireland?

A pipeline of over 2.5GW of grid-scale battery projects has now emerged in Ireland, with capacity projections increasing by 25 per cent in recent years.
