

Italian photovoltaic energy storage policy

Overview

As a rule, electricity storage systems can be installed in photovoltaic systems already subsidized by the GSE without losing the subsidy, provided that they are correctly integrated into the electricity grid, in other words the installation is carried out in compliance with the legal and regulatory provisions on connection, transmission, distribution, metering and settlement services and in accordance with the relevant technical regulations (CEI standards). Does Italy need electricity storage?

As Italy's energy mix is increasingly composed of variable renewable energy sources, electricity storage will be needed to integrate power generated by renewables into the national grid and make it available when sun and wind energy are not accessible.

Are battery energy storage systems needed in Italy?

Therefore, battery energy storage systems (BESS) are needed in Italy. The Italian market for BESS is growing rapidly and currently amounts to 2.3 GW but it almost exclusively consists of residential scale systems, associated with small scale solar plants, having a capacity of less than 20 kWh.

Is there a need for energy storage solutions in Italy?

Local industry contacts, as well as U.S. sector firms, have also indicated to Post that there is a need for energy storage solutions in Italy.

Why is a grid-scale battery energy storage system important in Italy?

As the penetration of solar power increases, grid stability has become a critical issue. In response, Italy is prioritizing the development of grid-scale battery energy storage systems (BESS Italy) alongside new industrial and commercial energy storage projects.

Is Italy a leader in industrial energy storage and commercial energy storage?

Accordingly, there is a growing market for industrial energy storage and

commercial energy storage projects, positioning Italy as a leader in advanced Italy storage solutions and renewable energy Italy initiatives.

How will Italy's solar power impact grid stability?

This rapid expansion in Italy's solar is fueling the country's drive to have renewables contribute to 65% of electricity consumption by 2030. As the penetration of solar power increases, grid stability has become a critical issue.
