

Malta adds new energy photovoltaic site

Overview

What are the new grant schemes for solar energy in Malta?

The government of Malta launched six new grant schemes to incentivise the production, storage and use of renewable energy as part of the €9 million investment. The aid for solar energy will accommodate households with already existing systems to utilise battery powered systems and help new families setup the installation of new solar panel systems.

How many PV installations are there in Malta?

The stock of PV installations amounted to 34,955 of which 85.6 per cent were installed in the region of Malta and 14.4 per cent were in the Gozo and Comino region. The Northern Harbour and Western districts accounted for 37.5 per cent of the total stock of PV installations with 6,848 and 6,270 installations respectively.

Could floating off-shore solar farms provide energy for Malta?

An 8,000 panel site has been approved at a disused landfill site near Birżebbuġa in February 2019. A 2018 pilot project led by MCAST was conducted to investigate the potential of floating off-shore solar farms to provide energy for Malta.

How much is a feed-in tariff for a photovoltaic system?

A second scheme is also being re-issued, offering a beneficial feed-in tariff for photovoltaic systems under 40kWp. The feed-in tariff is set at €0.15 per kWh for 20 years and does not include a grant. The application process is now simpler due to automatic approval of the first part of the application process.

What is a photovoltaic system?

Photovoltaic (PV) system: A complete set of components for converting solar radiation into electricity by the photovoltaic process, including the array/s of photovoltaic modules that collect and absorb sunlight for conversion into

electricity, inverter/s and associated balance of system components.
