

Mobile charging pile energy storage

Overview

Mobile energy storage charging has three major advantages: from the perspective of electricity consumption, charging gets rid of the constraints of the grid, realizes peak shaving and valley filling and reduces grid load, making charging safer and more secure; from the perspective of site, charging breaks through the space Limited, no infrastructure construction is required, and deployment is more flexible; from the perspective of application scenarios, it breaks the limitation of thinking, that is, it is a charging pile and an energy storage station, and the economic benefits are directly doubled.
