

Moisture-proof battery cabinet production integrated system

Overview

What is included in a battery cabinet?

Each battery cabinet includes an IP56 battery rack system, battery management system (BMS), fire suppression system (FSS), HVAC thermal management system and auxiliary distribution system. Outdoor liquid cooled and air cooled cabinets can be paired together utilizing a high voltage/current battery combiner box.

How does moisture control affect EV battery performance?

Moisture Control The key metric in moisture control is the dew point— the temperature at which water vapour in ambient air starts to condense. The lower the dew point, the lower the water vapour content in the air. Even small amounts of moisture in the air can affect the integrity and compromise the quality of the finished EV battery.

What is a Tier 1 LFP battery cabinet?

Utilizing Tier 1 LFP battery cells, each battery cabinet is designed for an install friendly plug-and-play commissioning with easier maintenance capabilities. Each outdoor cabinet is IP56 constructed in a environmentally controlled liquid cooled cabinet including fire suppression.

What is control level & internal moisture load in clean & dry rooms?

The control level and internal moisture load in the Clean & Dry rooms are used to determine the size and airflow requirement of the dehumidification system. The internal moisture load comes mainly from people working in the dry room and infiltration from air lock openings.

Why do you need an outdoor Battery Cabinet?

The cabinet is designed specifically to protect it from human damage, water, dust and other damages. Climate controlled products such as air conditioners, heat exchanger, or TEC coolers are installed on outdoor battery

cabinet for keeping a stable temperature inside cabinet so as to increase service life and stability of battery.

What is a solar engery Battery Cabinet?

The solar engery battery cabinet was designed for battery installations, due to a cabinet of this design's scarce availability that was suitable for a variety of lithium-ion batteries. The solar battery equipment cabinets are made specifically for the solar industry with an aim to make installations safer and easier for consumers.
