Why should you choose a solar inverter in New Zealand?

With the right solar inverter, solar energy can be a sustainable and cost-effective energy option for homes and businesses in New Zealand. Save money, invest in your property and save the planet! Choose from top-quality SMA and GoodWe solar inverters for efficient and reliable solar power systems.

What types of solar inverters are available in NZ?

There are different types of inverter available. This includes inverters that can connect to the electricity grid based on your home's connection. One of the most common types of solar inverter in use in NZ, however, is the hybrid inverter.

Are hybrid inverters smart?

Hybrid inverters are smart inverters. They are able to convert DC power into AC power just like string inverters, but they are also able to manage multiple streams of electricity and intelligently send those streams where they need to go, such as to critical appliances, solar batteries, or back to the grid.

Can a goodwe inverter oversize a DC output?

The GoodWe Inverter can have the DC Input oversized by 50% and it has a unique AC output oversizing capability of 10%. Their failure rate is lower than 0.5% across the board! Solar energy is a popular and cost-effective option for New Zealand homes and businesses looking to reduce their carbon footprint and save on energy costs.

What are the different types of inverters?

String inverters are usually the most cost-effective option, while string inverters with optimizers and microinverters often come at a higher cost but offer more flexibility. To gain a deeper understanding of the different types of inverters and their features, contact one of our team.
