

Photovoltaic inverter container manufacturer s quotation

Overview

Why do solar and wind developers need a PV inverter?

With the U.S. rapidly increasing its renewable energy generation, solar and wind developers need PV inverters to convert DC to AC currents before stepping up voltages and interconnecting to the grid.

What is a string and Central PV inverter?

Our string and central PV inverters (3,600 - 3,750 kVA) and PV inverter MV skids - PV inverter (s) plus an MV transformer - are for solar and wind developers. Our string and central PCS (3,200 - 5,500 kVA) and PCS MV skids - PCS plus an MV transformer - cover the needs of solar, wind, and BESS developers.

Why should you use a micro-inverter?

Use with one or more containers creates an extremely secure system. Each panel is equipped with a micro-inverter, allowing the operation of each panel to be monitored in real time. Reduces service and installation costs. Requires mains power supply. This is the solution for those most demanding, where access to the mains is not possible.
