

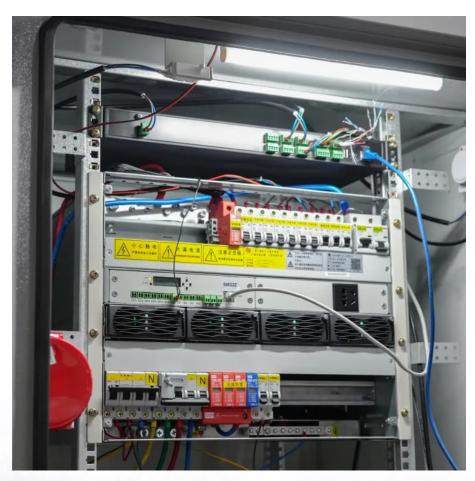

Photovoltaic inverter ratio selection

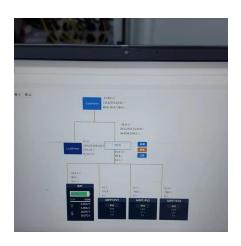

Overview

The DC-to-AC ratio — also known as Inverter Loading Ratio (ILR) — is defined as the ratio of installed DC capacity to the inverter's AC power rating. It often makes sense to oversize a solar array, such that the DC-to-AC ratio is greater than 1.

A PV to inverter power ratio of 1.15 to 1.25 is considered optimal, while 1.2 is taken as the industry standard. This means to calculate the perfect inverter size, it is always better to choose an inverter with input DC watts rating 1.2 times the output of the PV arrays.

Photovoltaic inverter ratio selection

What are the key considerations for photovoltaic ...

The voltage ratio must align with the output characteristics of the photovoltaic system (inverter voltage typically fluctuates by $\pm 5\%$) and grid connection ...
