

Photovoltaic panels on rural roofs in France

Overview

Are solar panels a good investment in France?

As electricity prices continue to soar in France - up 60% in four years - more people are turning towards solar panel kits, which promise to help users save on energy costs and installation prices. The estimated extra cost of electricity in 2024, compared to 2020, is €540 per household per year.

Are photovoltaic projects developing in France?

Yes, in France, photovoltaic projects of all sizes have historically been developed on agricultural lands and buildings – insofar as they provided farmers with additional income. However, there are no indicators that can be used to quantify the number of projects developed, or even the exact potential.

How many solar PV installations are there in France?

At the end of the first quarter of 2023, only 19 GW of solar photovoltaic (PV) installations were installed in France, meaning there is room for improvement. Since the legal regime was introduced, there have been encouraging results.

Is France a good country for rooftop solar?

France remains one of the top performing countries when it comes to the development of Rooftop solar policy and practices, but deliverables still need to be achieved. France's photovoltaic (PV) policies are developed within the National Low Carbon Strategy and the Energy Programme Decree.

Are Floating photovoltaic systems regulated in France?

In France, the floating photovoltaic sector is not regulated by specific provisions. There are two sets of rules to be considered for the installation of FPV systems: Authorisation under urban planning law. Depending on the output, FPV projects must be authorised by a prior declaration or a building permit.

Is photovoltaic production on agricultural land sustainable?

Currently, three different regimes coexist in France regarding photovoltaic production on agricultural land, i.e.: “Agrivoltaism” stricto sensu. It is defined as solar electricity production located on an agricultural land and contributing in a sustainable way to the agricultural production.
