

Ring high power industrial frequency inverter

Overview

What is ring's new inverter range?

The new inverter range from Ring has been developed to address the specific issues raised by vehicle converters and fleet managers, who need highly efficient, compact power sources in their vehicles when they are being used to work remotely.

What types of sine wave inverters are available?

We have a wide range of pure sine wave and modified sine wave inverters for both 12V inverters and 24V vehicles, available with either UK three pin or European two pin sockets. Additional options can also provide USB, connectivity and power management features. See the full range below.

Are ring inverters reliable?

Ring's inverters provide a reliable source of mains power while working remotely. The PowerSourcePro and PowerSourcePure range of commercial grade inverters provide an AC mains power source from the vehicle battery, allowing operation of mains powered electrical equipment on the move.

What are the new inverters?

The new inverters feature extruded metal casings, making them robust enough to withstand tough working environments, as well as heavy duty input cables and clamps. The new range includes models with a range of power outputs, from 600W and up to 4000W, available in Pure Sine Wave and Modified Sine Wave, with SRPs starting at £229.

What is a pure sine wave inverter?

Pure sine wave inverters provide an extremely pure sine wave output, which replicates the normal domestic mains supply. This makes them ideal for powering more sensitive electronics, and able to power the widest range of equipment.

What is a 12V & 24V inverter?

12V inverters and 24V inverters for vehicle conversion. Suitable for commercial use. Provides mains power off-grid in work vans and vehicles.
