Overview

How to charge a portable power station?

What wattage charger should I use?

Fix: Charge the power bank alone for the fastest speeds. Match the charger's output wattage with the power bank's input rating.

Can I use a slow charger on a fast charging device?

Avoid using it while charging. A 20,000mAh power bank will naturally take longer to charge than a 5,000mAh one.

Dust and lint can clog up the USB port, causing a weak connection and slower charging. Use a toothpick or compressed air to clean it. Some power banks have internal glitches that slow down charging. Fix: Hold the power button for 10+ seconds or check the user manual for a reset function. How Fast Should a Power Bank Charge?

Why is my fast charger not working?
