

Smart device and base station communication

Overview

LoRaWAN enables long-distance communication between low-power devices and strategically placed base stations. These base stations act as the bridge, receiving data from end-devices and transmitting it to network servers for processing.

Smart device and base station communication

A smart millimeter-wave base station for 6G application based on

Here, we propose a large-scale 2-bit millimeterwave programmable metasurface to build an integrated smart base station framework for 6G communications. The meta-array is ...
