

Solar Panel On-site Energy Monopoly

Overview

Is our power system monopolistic?

Solar, batteries, smart generator sets, artificial intelligence, and software have become increasingly available to provide power service directly to homes and businesses. Yet our current power system's monopolistic ecosystem continues to thwart price signaling, technological improvements, consumer choices and technological advancements.

Is rooftop solar a good option for a building?

Rooftop solar remains one of the most accessible and cost-effective ways to generate on-site power, particularly for facilities with high daytime energy usage. These systems can typically offset a large portion of energy consumption in a building and are relatively simple to install.

Is the utility monopoly a relic?

The long-standing utility monopoly model is a relic from a time when it was deemed a social good to have a single wire going to a single home, and when consumption of power was ever-increasing. Times have changed.
