

Solar Panels in South America

Solar Panel Relevance

Overview

Why is solar photovoltaic market growing in South America?

The increasing demand for the energy on the account of rising population and increasing industrialization is anticipated to boost the solar photovoltaic market in South America. However, the increasing focus on alternative clean energy sources such as natural gas, wind, and biomass are expected to hinder the growth of the market.

What are the key drivers of South America solar photovoltaic market?

South America solar photovoltaic market is expected to grow at a CAGR of more than 11% during the forecast period. The primary drivers of the market include supportive government policies, rising demand for renewable energy, efforts to reduce GHG emissions, and the declining cost of solar PV systems.

Why is solar energy important in South America?

The region has a large amount of sun, wind, water, and other natural resources that can be harnessed to generate clean energy. Solar energy, which is at the helm of global energy transition goals, is a crucial energy source powering the transition for the South American continent as well.

Will Brazil dominate the South America solar PV market?

Overall, Brazil's solar power sector is set to experience a decent growth, and is likely to dominate the South America solar PV market during the forecast period. The South America solar photovoltaic market is fragmented.

Which country has the most solar energy in South America?

Brazil is the leader in solar energy in South America as it surpassed 50 GW of installed capacity in 2024. South America continued its steady solar growth over the last half-decade in particular, and overall renewable energy capacity additions in general, through the year 2024.

What is South America's largest solar photovoltaic project?

South America's largest solar photovoltaic project is underway in Brazil. Enel Green Power has started operations of a 475 MW section of Sao Goncalo solar photovoltaic plant in the north-east of Brazil has the capacity to produce more than 1,200 gigawatt-hours (GWh) per year when fully functional.
