

## Solar Temperature Control System Factory

#### **Overview**

#### What is a solar thermal controller?

The solar thermal controller is a critical component of any solar system, large or small - selecting the right solar controller will help you get the most out of your system for decades to come. Solar Panels Plus features the line of iSolar controllers.

How does a solar controller work?

This solar controller can be used to monitor and operate the solar thermal system, control various devices via it's multiple relay conrol, and function as a thermostat (time controlled). The controller is completely adjustable, and works primarily on the inputs of the temperature sensors as well as the system layout.

How many temperature sensors does a solar controller have?

Up to 4 Temperature Sensor Inputs: This solar controller allows up to 4 temperature inputs, allowing you to view the temperature of the solar array, the solar tank, as well as other points throughout the system. Energy Metering: Integrated energy metering tells you exactly what your system is producing, and the effectiveness of your solar array.

What is the SPP Isolar BX solar controller?

The SPP iSolar BX is a multi-function solar controller with a number of add-on functions and relay controls. The iSolar BX solar controller can be used to control your solar hot water or solar space heating systems, or can be customized to control any number of other solar related applications.

How does the solartouch® controller cool the pool/spa?

This allows the air in the solar collectors to be evacuated from the system without damage to the pump. The SolarTouch® Controller can cool the pool/spa by circulating water through the solar collectors when the solar

temperature is at a lower temperature than the pool/spa water (typically at night). Cooling must be enabled in the Cooling Menu.

What is a solar controller?

The solar controllers offered by Solar Panels Plus features a full line of customizable options and features, ranging from multiple sensor inputs, remote monitoring, relay controls, and much more.

#### **Solar Temperature Control System Factory**

#### **PG Proposal Template**

Solar's Turbotronic 4 control system is used for sequencing, control, and protection of the gas turbine package, and for providing an extensive range of options for monitoring and plant control.
