

# South America Communications sets up 5G base station

#### **Overview**

What factors shape Latin America's 5G deployment?

As Latin America prepares for next-generation telecommunications, a wide variety of factors—domestic and external—will shape 5G deployment in the region. The following are five key observations of Latin Americas mobile telecoms landscape at present. 1. At present, the Latin American region is making considerable strides in 4G availability.

Will 5G SA be available in Brazil?

Moving to cloud-native infrastructure will be crucial to enable 5G standalone (5G SA) deployments. As is the case globally, most initial 5G deployments in Latin America have used a non-standalone (NSA) architecture. 5G networks in Brazil are a notable exception. 5G SA availability will increase in other parts of the region, however.

How will 5G impact Latin America?

Data correct as of January 2023. 5G is in its early stages of deployment in most countries of Latin America. However, as it is deployed, it will bring productivity and eficiency gains that will drive significant economic impact. These efects will reach more than \$60 billion in 2030, representing 0.9% of total GDP in the region.

Will 5G delay deployment in Latin America?

Latin America's still-limited progress on recommended 5G spectrum allocation will also delay deployment, as will a relatively small initial consumer base as the region's mobile users take time to upgrade to 5G-enabled handsets. 5G adoption is forecast to reach an average of only 8 percent of Latin American consumers by 2025.

Will Huawei play a role in 5G deployment in Latin America?

Huawei's cutting-edge technologies, along with an already extensive presence

in Latin America's major markets, will ensure that the company plays a prominent role in 5G deployment in the region in the coming years. In Brazil alone, six out of seven 4G mobile networks were constructed by Huawei.

Is 5G home broadband a good idea in Latin America?

According to a GSMA Intelligence survey, 5G home broadband is an extremely or very appealing proposition for two thirds of Latin American consumers. 5G FWA will mainly be used to facilitate first-time home broadband adoption in the region, in addition to improving speeds for households reliant on cable/DSL connections with lower performance.
