

Specialized energy storage equipment

Overview

What are commercial energy storage products?

High-quality commercial energy storage products can achieve real-time monitoring of remaining capacity and load size of power lines with the support of energy management systems, and can interact with energy units such as distributed photovoltaics and charging equipment.

What are the applications of energy storage system?

The energy storage system can achieve applications such as solar energy storage integration, energy transfer, primary frequency regulation, secondary frequency regulation, reactive power support, short-circuit capacity, black start, virtual inertia, damping, etc. in conjunction with photovoltaic power generation.

What is xstorage battery energy storage system (BESS)?

The xStorage battery energy storage system (BESS) offers 250 to 1000 kWh of stored energy, providing eco-friendly backup power during outages and optimizes solar energy consumption, while also managing peak demands to reduce utility costs. Capture energy whenever it's available and use it on demand.

What is a shared energy storage power station?

This project is the first shared electrochemical energy storage power station of SVOLT, with a rated total installed capacity of 50MW/100MWh for the energy storage system. Shared energy storage can reduce the investment cost of new energy projects, play a role in power regulation, and promote the matching of power supply and demand.

Which energy storage series products have full-stack coverage?

The energy storage series products of SVOLT achieved full-category coverage, providing a full-stack solution for cells, PACK, systems, and intelligent

applications. Advanced staking process is adopted for SVOLT products and all series products have undergone penetration test to ensure safety.

Why is energy storage important?

Energy storage systems allow for effective utilisation and decentralised production of renewable energy such as wind and solar power by storing the surplus energy generated during peak periods and releasing it when needed. This ensures grid stability and reliable power supply at lower costs.
