

The Democratic Republic of Congo has the largest number of photovoltaic communication battery cabinets

Overview

How much electricity does the Democratic Republic of Congo have?

The Democratic Republic of Congo has a population of 85 million, of whom only around 9% have access to electricity, a figure which falls near 1% in rural areas. The nation has total electric generation capacity of just over 2.67 GW, of which 2.54 GW is hydropower and 135 MW thermal.

What is the government's vision for power generation in Congo?

The government's vision is to increase the service level to 32 percent by 2030. Lack of access to modern electricity services impairs the health, education, and income-generating potential of millions of Congolese people. Most power generation development is directed and funded by mining companies seeking to power their facilities.

What is the current exploitation rate of the Congo Basin?

Despite the government's efforts to launch programs to develop the hydroelectric sector and exploit the power of the Congo Basin's numerous rivers, the current exploitation rate of these resources remains less than 3%, demonstrating significant, untapped opportunities.
