

Tunisia s current energy storage power stations

Overview

How much electricity does Tunisia get from renewable sources?

Tunisia aims to generate 30% of its electricity from renewable sources by 2030. The country currently gets only 3% to 6% of its electricity from renewable sources, mostly from wind and hydro. Solar energy capacity is at 35 megawatts (MW). In addition to wind and hydro, the Tunisian government plans to use biogas to produce renewable energy.

What is the energy sector in Tunisia?

Revised in November 2024, this map provides a detailed view of the energy sector in Tunisia. The locations of power generation facilities that are operating, under construction or planned are shown by type – including gas and liquid fuels, natural gas, hybrid, hydroelectricity, solar (PV and CSP), wind and biomass/biogas.

How much power does Tunisia have?

Tunisia's total installed renewable power generating capacity had reached approximately 352 MW by the end of 2019, with wind energy at 245 MW, hydropower at 66 MW) and PV at 62 MW (IRENA, 2020b).

What are the different types of power generation facilities?

The locations of power generation facilities that are operating, under construction or planned are shown by type – including gas and liquid fuels, natural gas, hybrid, hydroelectricity, solar (PV and CSP), wind and biomass/biogas. Major substations are indicated as are power generation projects with battery storage.

Tunisia s current energy storage power stations

Tunisia storage power plant

Tunisia has a current power production capacity of 5,944 megawatts(MW) installed in 25 power plants, which produced 19,520 gigawatt hours in 2022. State power utility company STEG ...
