#### **Overview**

Is Uruguay a net importer of energy?

Once a net importer of energy, Uruguay now exports its surplus energy to neighbouring Brazil and Argentina. In less than two decades, Uruguay broke free of its dependence on oil imports and carbon emitting power generation, transitioning to renewable energy that is owned by the state but with infrastructure paid for by private investment.

Where does Uruguay's electricity come from?

Half of Uruguay's electricity is generated in the country's dams, and 10% percent comes from agricultural and industrial waste and the sun. But wind, at 38%, is the main protagonist of the revolution in the electrical grid. But how did the country achieve it?

.

Does Uruguay use fossil fuels?

Just 17 years ago, Uruguay used fossil fuels for a third of its energy generation, according to the World Resources Institute. Today, only 2% of the electricity consumed in Uruguay is generated from fossil sources. The country's thermal power plants rarely need to be activated, except when natural resources are insufficient.

How did the energy industry change in Uruguay?

The true transformation began with a bold bet on wind energy. By 2008, Uruguay was experiencing economic growth that outpaced its existing energy supply. As demand surged, blackouts became more frequent, leading to increased electricity bills and the implementation of rationing measures.

Why is Uruguay achieving 98% renewable electricity?

Uruguay's remarkable achievement in achieving 98% renewable electricity

showcases the effectiveness of innovative public-private partnerships and a steadfast commitment to sustainability.

Why did Uruguay start using wind turbines?

Avoiding nuclear power entirely, Uruguay first embraced wind turbines as a source of cheap, reliable power; providing 40% of the country's capacity in less than a decade.
