

# What are the photovoltaic energy storage systems in Oman

#### **Overview**

Will Oman have a solar energy storage system?

Additionally, PDO is finalizing plans for a 100 MW solar PV-based IPP, named the 'North Solar Storage IPP,' set to include Oman's first battery energy storage system (BESS). This BESS, using lithium-ion battery technology, will store electrical energy and supply a maximum of 100 MW peak power to PDO's grid during daylight hours.

What is the solar power potential in Oman?

Oman receives a tremendous amount of solar radiation throughout the year, which is among the highest in the world\. There is significant scope for harnessing and developing solar energy resources throughout the Sultanate.

Can Oman's power sector regulate rooftop solar panels?

The Authority for Electricity Regulation Oman (AER) – Oman's power sector regulator, is taking steps to pave the way for homeowners to install rooftop solar panels. Any surplus electricity generated can be sent back into the national grid.

Is investing in solar energy profitable in Oman?

Solar energy in Oman is expected to become progressively cheaper in the near future and could offer a good return for investments. The success of solar energy in Oman is merely determined by the government's regulatory policies, fiscal incentives, and public financing.

Which region in Oman has the highest solar radiation?

The highest solar radiation in Oman is found in Marmul. Other regions with high solar radiation include Fahud, Sohar, and Qairoon Hairiti. The desert areas in Oman generally have the highest insolation of solar energy, while the coastal areas have the least.

How much will Oman's power sector invest in the next six years?

Taken together with parallel plans for the implementation of a raft of Wind IPPs and combined cycle gas turbine (CCGT) power projects, total investment in Oman's power sector is set to balloon to well over \$5 billion over the next six years through to 2030.
