

# What equipment does the energy storage box need

#### **Overview**

Why should you choose a battery based energy storage system?

By sourcing batteries separately, users can expand their energy storage capacity as needed without overhauling the entire system. This scalability makes it an ideal solution for both residential and light commercial applications, future-proofing investment and enabling smart energy management.

What is a battery energy storage system?

Battery energy storage systems (BESS) stabilize the electrical grid, ensuring a steady flow of power to homes and businesses regardless of fluctuations from varied energy sources or other disruptions. However, fires at some BESS installations have caused concern in communities considering BESS as a method to support their grids.

What is a liquid cooled battery energy storage system?

The system consists of: Ready to install liquid-cooled battery energy storage system with one (2-hour version) or two (4-hour version) battery cabinets, and a PCS cabinet. Liquid cooling provides two years longer battery service life and 15% higher discharge capacity, while maintaining less than 2.5 degree C delta between cells.

How many energy storage units can be connected together?

Stackable and lightweight, installers can effortlessly connect up to four units together for additional energy storage. Available in three sizes including 9 kWh, 13.5 kWh, and 18 kWh to meet an installation company's growing customer energy demands. Operating modes: back-up mode, self-use mode, time-of-use mode and custom modes.

What is a power storage 20?

Scalable to handle electrical services up to 800A across multiple units, the

Power Storage 20 delivers clean reliable energy to every circuit in the home. Combine with Savant Load Management to provide automatic load shedding capabilities on grid loss or at various state of charge (SoC) levels.

Do ESS batteries need a fire rated enclosure?

"Some ESS systems have location restrictions, requiring outdoor installation or fire-rated enclosures. In some cases, batteries must also be protected from direct impact with the use of specific mounting or enclosures.
