

What is the power supply for the Croatian base station

Overview

How is electricity supplied in Croatia?

Customers in Croatia are supplied with electricity from power plants in Croatia, from power plants built in neighboring countries for Croatia's needs and with electricity procured from abroad. By its size, the Croatian power system is one of the smallest power systems in Europe.

What is a Croatian power system?

The Croatian power system comprises plants and facilities for electricity production, transmission and distribution in the territory of the Republic of Croatia.

What type of plug is used in Croatia?

In Croatia, types C and F are the official standards. Like almost all Continental European countries, Croatia has standardized on the German plug and socket system. What is the mains voltage in Croatia?

Just like the rest of Europe, the voltage in Croatia is 230 volts and the frequency is 50 Hz. Croatia has standardized on type F sockets and plugs.

What is the voltage in Croatia?

Just like the rest of Europe, the voltage in Croatia is 230 volts and the frequency is 50 Hz. Croatia has standardized on type F sockets and plugs. Type C and type E plugs can also be used thanks to their compatibility with type F sockets.

Why is the Croatian power system interconnected with other countries?

For the security reasons, quality of supply and exchange of electricity, the Croatian power system is interconnected with the systems of neighboring countries and together with them it is connected into the synchronous network of continental Europe.

Do I need a power adapter in Croatia?

If your devices are compatible with these specifications, you will not need a power adapter. However, if your devices use a different plug type or are not compatible with the voltage in Croatia, you will need a power adapter and/or a voltage converter/transformer. The standard voltage in Croatia is 230 V, and the standard frequency is 50 Hz.
