

Wholesale solar power systems in the Democratic Republic of the Congo

Overview

Could solar power be the future of energy in Congo?

Congo is one of the top five oil producers in Sub-Saharan Africa. But despite its rich energy resources, the electrification rate is low, especially in rural areas, mainly because of a lack of electricity infrastructure. But solar power could be the future as it is also said to be cheaper for households.

Why are solar-powered filtration systems being installed in the Republic of Congo?

To reduce water pollution in the Republic of Congo, solar-powered filtration systems have been installed to purify water.

Does the DRC have solar power?

Solar In addition to hydropower, the DRC possesses significant potential for solar energy, offering a potential of 70 GW with noticeably high solar radiation averaging 6 kWh/m²/day.

How much power does the DRC have?

Despite the DRC's immense endowment of varied renewable energy potential which includes hydroelectric, biomass, solar, wind and geothermal power, the current installed generating capacity is approximately 2,844 MW, providing access to merely 19% of its nearly 85 million-strong population.

What is the potential for wind energy in the DRC?

Wind Meanwhile, potential for wind energy in the DRC is also significant and largely untapped. Offering a potential of 15 GW, with wind speeds averaging 6-6.6m/s throughout the country, there are a number of high potential areas where wind power could be leveraged across the country.

What is the energy mix in the DRC?

The DRC's energy mix is comprised primarily of hydroelectric power, with the bulk of the country's domestic generation produced from the country's Inga I and Inga II dams located in the Kongo Central Province, boasting an installed capacity of 351 MW and 1,424 MW, respectively, for a combined capacity of 1,775 MW.
